

3 new products in our professionell Car Care serie – No1

Pressrelease, 03-04-2009
Lahega Kemi AB

Now we expand our broad, professional Car Care serie – No1 – with three new products. Two new compounds, and an entirely new – dirt rejection and self-cleaning – product for the rims.

The uniqueness of the new compounds is that they have a high efficiency with a minimum of swirls. For best result you should use our new buffing technique.

FastCut 13

A silicone free polishes with a high cutting level. The product removes severe scratches, oxidation and stains. *FastCut 13* is oily and smooth and therefore leaves minimal residues of polishing dust behind. *FastCut 13* is used with our orange polish pad, *MediumCut 165 mm*.

FinishCut 18

A silicone-free polish with fine polishing effect. The product is designed to sensitive paints and to remove swirls from coarse compounds. *FinishCut 18* is oily and smooth and therefore leaves minimal residues of polishing dust behind. *FinishCut 18* is used with our black polish pad *SoftCut 165 mm*.

For best results: **1.** Apply the polish on the surface with a machine (800 rpm). **2.** Increase the speed to 1500 rpm. Buff the surface until you have achieved the desired results. **3.** Decrease the speed to 800-1000 rpm and buff the surface to remove any swirls.

SurfTec 68

SurfTec 68 is a silicone free protective agent for all rims and wheel sides. Application provides a micro thin protective film which makes break dust and dirt not stick to the surface. The treated surface is self-cleaning in the rain. *SurfTec 68* may also be applied to other surfaces that not will be in physical contact. Protection last around 1 month. *SurfTec 68* is available in a aerosol can and is sufficient to treat about 50 rims.

We participated with *SurfTec 68* in the contest, *Innovations Awards* in *Automechanika 2008*, Frankfurt, Germany and went to the final round in competition with a large number of products from all around the world. Now it is ready for worldwide release.
